Customer Journey Map

Purpose: Understand the customer experience across the current process and identify pain points and opportunities for improvement

Scenario: Customer wants to check the status of an existing service/request

Journey Stage	1. Need Identified	2. Contact Support	3. Verification	4. Status Search	5. Receive Update	6. Follow-up (if required)
Customer Actions	Customer wants to know the status of an existing service/request.	Contacts support via phone or email to request an update.	Provides account details and verify identity with the agent.	Waits while the agent checks one or more internal system.	Receives status update from the agent (phone call or email).	Contacts support again if information is unclear, incomplete, or outdated
Touchpoint/ Channel	-	Phone / Email	Support Agent	Internal Systems	Phone / Email	Phone / Email
Customer Need	Quick and easy way to check status.	Easy access to someone who can help.	Fast verification without repeating information.	Accurate, real-time status information	Clear, complete, and reliable update.	Resolution without having to chase multiple times.
Pain Point	No self-service option to check status.	Long wait times. Queues / hold time.	Repeats information already on the file. Time-consuming.	Agent searches systems; handoffs may be needed.	Information may be incomplete. May not answer all questions	Need to contact again. Frustration due to delays / repetition.
Emotion	Neutral	Frustrated	Neutral	Anxious	Relieved	Frustrated
Opportunity	Provide self-service visibility of requests.	Digital channel with real-time access.	Secure login/single sign-on. Auto-fetch customer information.	Self-service status visibility	In-app status dashboard. Clear, complete information. Proactive notifications	Reduce need for follow-up through better visibility &
Key Insight	Customers experience delays, repetition, and uncertainty primarily due to lack of self-service visibility and manual internal processes. The biggest opportunity is to provide real-time status visibility and proactive updates through a digital self-service platform.
